Toy Grade Black Printing Ink – Conforming to EN 71-3

Dear Sarah

With regards to your enquiry for Toy Grade Printing Inks I can confirm the following.

Based on the known information on the raw materials used and the professional handling of the printing ink, WB 02339 Good Rub Black, is produced free of metals and conforms with the European EN 71-3 Standard for Toy Safety.

The European Standard EN 71-3 covers the migration of certain metals from materials used for making toys. Due to the in-part extremely low limit values, which are within the range of trace impurities or ubiquitous amounts, compliance with these limits cannot be ensured without analysis of the printed end product. Such analysis can be carried out by accredited laboratories.

Should you require any further information please do not hesitate to contact me.

Yours sincerely
